

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

SCIENTIFIC NEWS.

— At a recent meeting of the Anthropological Institute of London, Gen. Pitts Rivers read a paper on the discovery of flint implements in the gravel of the Nile valley, near Thebes. The worked flints were found imbedded two or three meters deep in stratified gravel. From this it appears that the evidence of human workmanship has been found in gravel deposits which had become so indurated that the ancient Egyptians were able to cut flat-topped tombs in it, supported by square pillars of gravel, which have retained their form uninjured to the present day, proving an enormously greater age for the flints imbedded in the gravel, some of which were chiseled out of the sides of the tombs.

— Apropos of the sittings of the Concord School of Philosophers, the same newspaper reports the proceedings of a "chinch-bug convention" in Kansas. It was stoutly maintained by the Philosophers of the Granger School, that chinch-bugs had long been an infliction to farmers; but no one called them such names as one or two of the Concord philosophers bandy about; and we should much prefer being a chinch-bug, luxuriating in the open air, than like a venerable transcendentalist's "soul," to be pent up as if a mere *Cysticercus* in some one's "occiput."

— Two eminent botanists have recently died: Dr. L. Rabenhorst, of Meissen (Saxony) was a well-known botanist and editor of *Hedwigia*. Among his numerous works was one on the fresh-water diatoms of Germany. Dr. M. J. Schleiden, a prolific writer, and author of "Die Planze" and "Das Meer," died at Frankfort, aged 77 years.

— The fresh-water jelly fish (*Limnocoodium*) has reappeared in the Victoria Regia tank in the Botanical Gardens. Another writer in *Nature* speaks of sea anemones (*Actinia*) as living and flourishing in a fresh-water aquarium; no particulars are given as to the length of time, etc.

— The first part of a fourth edition of Griffith and Henfrey's *Micrographic Dictionary* has appeared. It is expected to be completed in twenty-one monthly parts.

—:O:—

PROCEEDINGS OF SCIENTIFIC SOCIETIES.

NATURAL HISTORY SOCIETY OF ILLINOIS, June 12.—According to programme the members met at the Palmer House, where several new names were added to the list and some other business was transacted, among which was the organization of the entomologists into a separate section, with C. E. Worthington as president and G. H. French, secretary. The meeting in Chicago numbered about thirty, somewhat smaller than the Ottawa meeting, but that may be accounted for, perhaps, by the fact that the proposed place for the field meeting did not afford so good an opportunity for geologists, and hence they were out in smaller numbers.
